Welcome to the Autumn Edition of the Cogent Grazing Catalogue.

During what have been uncertain times over the past few months due to Covid-19 Cogent has remained driven to providing dairy farmers with genetics that drive on-farm profitability. One of the biggest influencers on profitability is a cows ability to produce high quality milk from one of the cheapest feeds available. Grass.

The line-up of bulls that follows in this catalogue combines 3 key grazing indices EBI, SCI and ACI, every single bull in this catalogue provides official data for SCI & ACI whilst 21 bulls provide official EBI data. This is to ensure we offer our farmers the most comprehensive set of data possible to make informed breeding decisions that will ensure genetic gain and ultimately produce cows that suit all types of grazing system.

As we continue to drive for improved efficiency we strongly believe that this offering coupled with SexedUltra4M provides one of the most comprehensive offerings available in today's marketplace.

Economic breeding index (€EBI) Explained

The EBI base was developed in 2000 to ensure continued genetic gain on Irish farms. Farms that are typically grazing their herds for the majority of the year and that require cows to produce high quality milk from grass alone. It is also important for Irish cows to calve regularly, ensuring calving blocks stay tight and the most can be made of the summer grazing months.

The EBI base aims to develop a cow which can deliver the following:

- High solids
- Good fertility
- Increased Longevity
- Functional cattle with reduced stature but balanced frames
- Respond to concentrate when fed if milk price is high, but if milk price is low can sustain themselves off low input whilst getting back in calf with minimal costs.

EBI sires have allowed Irish farmers to work towards the following key goals:

- 80% of herd calving in 6 weeks
- Achieving less than 10% empty cows per year from 12 weeks of breeding
- Average cow in herd lasting 5 – 6 lactations.
- Breeding cows that produce 8% + solids (3.7% Protein & 4.3% Fat)
- Breeding cows that can produce 0.8 – 1.0 kilo of milk solids per kilo of body weight from grass each year

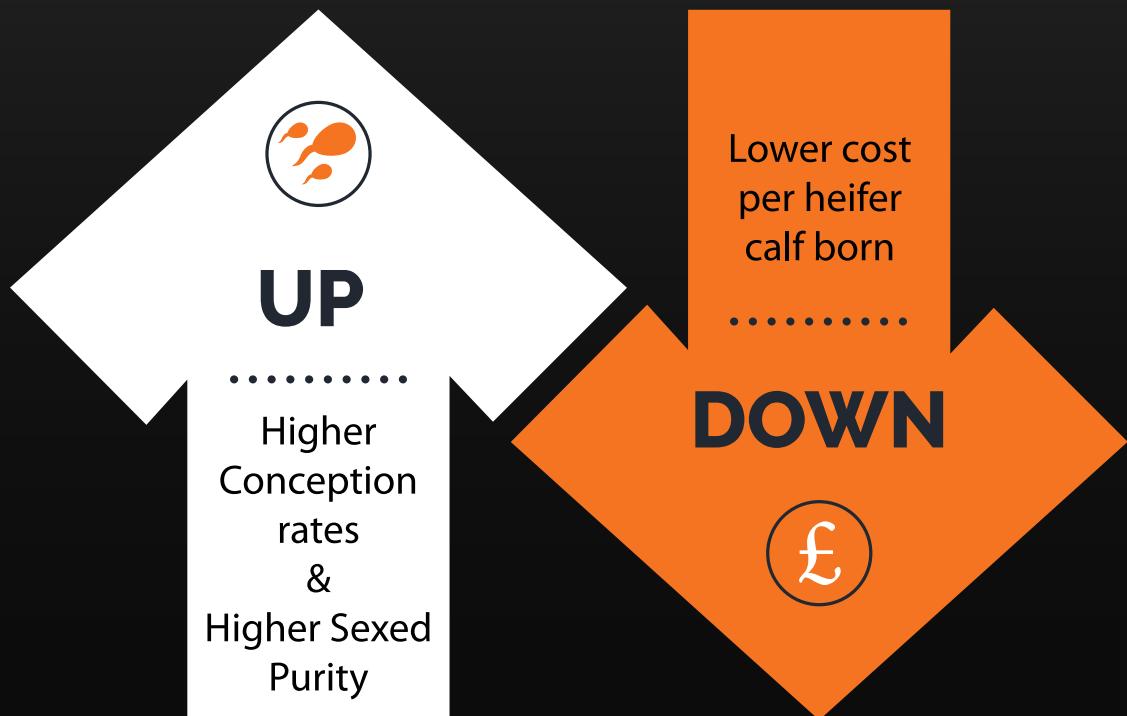

Milk Sub Index	Fertility Sub Index	Calving Sub Index
Takes into account component production with a small emphasis on volume	Includes both calving interval and survival, fertile cows last longer in the herd and will reduce calving interval	Direct and Maternal calving ease and gestation length are included in this figure with easy calving and lower gestation being desirable
Beef Sub Index	Maintenance Sub Index	Health Sub Index
High value indicates better cull cow value and carcass weight with a direct correlation to calf value.	Reduced stature and a balanced body condition will yield a high value here, meaning reduced maintenance costs	High index indicates a reduction in Mastitis, SCC and Lameness incidence

Calving Interval	Bulls with negative figures for calving interval will reduce calving interval of their daughters by the number of days indicated
Survival %	Bulls with a positive value will increase longevity of their daughters
DcE	Measured as a percentage, with this being the percentage of difficult calvings seen with that bull
Gestation Length	A negative figure is a reduction in the average gestation length of a HO/FR of 282 days, low gestation length bulls will suit late season breeding
Milking Speed	A lower figure indicates a quicker milking speed with the figure measured in seconds
SCC and Mastitis	Lower figures are desirable and will reduce incidence of both
Lameness	Lower figures are desirable and will reduce lameness

Bulls tested free for genetic recessives will not show these codes for formatting reasons

SexedULTRA 4M™

UK x PROVEN x RESULTS

GRAZING

AUTUMN 2020 CATALOGUE

“ We've been using Cogent High EBI sires and have seen a significant improvement in conception rates. After obtaining quotes from several companies and breaking down the cost per straw per € of EBI, Cogent came out with the highest EBI at the best price! The Cogent EBI bull selection offers great fertility and milk production whilst giving a solid, deep bodied animal to suit our Autumn calving system. The calves starting to hit the ground are strong, vigorous and are thriving well!

Giles Bristol – Crouch Farm, West Sussex
